This is the first office action for application number 10/079,804, Arm Apparatus for Mounting Electronic Devices with Cable Management System, filed on February 20, 2002. This application is a divisional of application number 09/406,006 filed September 24, 1999.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-13, drawn to an endcap for use in an extension arm, classified in class 403, subclass 300.
- II. Claims 14-21, drawn to a channel for use in an extension arm, classified in class 248, subclass 55.
- III. Claims 22-33, drawn to a forearm extension for use in an extension arm, classified in class 248, subclass 282.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, the endcap of Invention I may be used as an endcap for an electric motor having a shaft.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of

operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, the forearm extension in Invention III may be used for a light fixture.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, the channel of Invention II may be for a motorized seat adjuster for moving a seat fore and aft.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

This application is not a proper divisional application, in the parent application 09/406,066 a similar restriction requirement was given. In parent application number 09/406, 066, the claims were restricted to four inventions, i.e., Invention I drawn to an extension arm, Invention II drawn to an endcap, Invention III drawn to a lower channel, and Invention IV drawn to a forearm extension. According to MPEP 201.06, a later application for an independent or distinct invention, carved out of a pending application

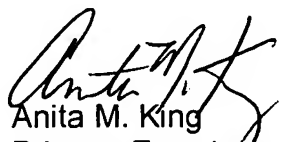

Art Unit: 3632

disclosing and claiming only subject matter disclosed in the earlier or parent application, is known as a divisional application or "division". This is not apparent in this application, it appears that the applicant has taken the non-elected inventions of the parent application and resubmitted them together in this application. This is not proper, only one of the non-elected inventions may be examined in this application, hence the restriction requirement above.
